Summary

Computer Science graduate with expertise in Python, SQL, Artificial intelligence and Machine Learning. Proven track record in building end-to-end AI applications, deploying robust RAG pipelines, and developing full-stack analytical tools using FastAPI. Adept at translating complex data into actionable business solutions. Seeking entry level roles.

Technical Skills

Languages & Frameworks: Python, SQL, C, FastAPI, Flask, Django, HTML, CSS

AI & Machine Learning: Deep Learning (CNNs), LLMs, RAG, LangChain, VectorDB (ChromaDB), TensorFlow, Keras, OpenCV, Scikit-learn, Prompt Engineering, Generative AI

Data & Analytics: Pandas, NumPy, MySQL, Tableau, Excel, Data Cleaning, ETL, Exploratory Data Analysis, Data Modeling, Data Argumentation

Tools & DevOps: Git, GitHub, Docker, CI/CD, Ollama

Experience

Amdox Technologies

Nov 2025 – Feb 2026

Data Science & Analytics Intern

Remote

- Utilized Python and SQL to evaluate telecom datasets, with a primary emphasis on analyzing customer behavior and churn patterns.
- Enhanced predictive modeling through rigorous data cleaning and specialized feature engineering techniques.
- Constructed interactive Tableau dashboards to track critical KPIs, including revenue trends and churn rates.
- Streamlined reporting processes by automating workflows and implementing advanced data quality verification checks.
- Developed comprehensive automated reporting systems and visualization tools to facilitate data-driven decision-making.

Projects

Smart AI Document Insights [\[GitHub\]](#)

- Engineered a solution capable of interpreting extensive documentation to produce automated insights.
- Developed a versatile data pipeline that processes various formats (PDF, DOCX, TXT, PPT, CSV, JSON) to identify risks, actions, and key summaries.
- Designed an enterprise-grade document intelligence system powered by FastAPI for efficient querying and processing.
- Stack: Embeddings, Vector Database, LangChain, RAG, LLM.

AI Powered ATS Resume Optimizer [\[GitHub\]](#)

- Designed and developed a comprehensive full-stack AI system for evaluating resumes against specific job requirements and producing ATS-optimized versions.
- Built a matching engine that uses spaCy for natural language processing to extract and analyze candidate skills.
- Leveraged local Llama 3.1 models through Ollama to detect missing competencies and enhance resume bullet points.
- Stack: FastAPI, React, spaCy, Ollama, ReportLab, pdfplumber.

Skin Cancer Detection using Machine Learning [\[GitHub\]](#)

- Successfully identified and classified malignant skin lesions, hitting a certified 92% diagnostic accuracy rate, by training a Convolutional Neural Network (CNN) using TensorFlow and Keras.
- Stabilized the training cycle, reducing model overfitting by 18%, by preprocessing a dataset of 10K+ dermoscopy images using OpenCV for sizing, filtering, and data augmentation.
- Stack: TensorFlow, Keras, OpenCV, Pandas, Scikit-learn, Flask.

Cryptocurrency Price Forecasting [\[GitHub\]](#)

- Analyzed historical Bitcoin price trends, reducing final forecasting error (RMSE) metrics by 12%, by building predictive time-series models (ARIMA, SARIMA, and LSTM) using Pandas and NumPy.
- Made complex price datasets easier to evaluate during review, delivering interactive, actionable visualizations, by mapping historical market volatility and structuring the output into Plotly and Seaborn dashboards.
- Stack: Pandas, Numpy, matplotlib, plotly, seaborn.

Certifications

- Deloitte - Data Analytics Job Simulation
- AWS - Foundations of Prompt Engineering
- Oracle - OCI 2025 Certified Data Science Professional
- Tata - GenAI Powered Data Analytics
- Anthropic - Claude 101 & Claude Code 101

Education

B.E - Computer Science & Engineering

2022 – 2026

VSM's Somashekhar R Kothiwale Institute of Technology
CGPA: 8.0

C.L.E PU College, Chikodi

Science (PCMB)

2020 – 2022
