Associate QA Tester

SUMMARY

Data Science & Analytics Intern with around 0+ years of experience in data analysis and business intelligence. Delivered a CNN-based skin cancer detection model that reached 92% accuracy and engineered fraud detection models handling over 50K transactions. Designed and launched KPI dashboards that streamlined reporting for telecom, finance, and retail projects, improving insight delivery for cross-functional teams. Known for clear communication, adaptability, and effective collaboration across stakeholders.

SKILLS

Quality Assurance & Game Testing: Game Testing, Bug Reporting, Bug Tracking Systems, Game Console Testing, PC Testing, In-House Software Systems

Programming & Scripting: Python, SQL, C, Git

Development Tools: Microsoft Office Suite, VS Code, PyCharm, Jupyter Notebook, Flask

Data Analysis & ETL: Data Cleaning, Exploratory Data Analysis (EDA), Data Modeling, ETL

Data Visualization: Tableau, Matplotlib, Plotly, Seaborn

Machine Learning: Scikit-learn, TensorFlow, Keras, XGBoost

WORK EXPERIENCE

Amdox Technologies

Remote

Data Science & Analytics Intern

Nov 2025 - Present

- Conducted functional testing of data extraction scripts using SQL and Python on Windows PCs, identified 12+ data anomalies, logged each issue in the internal bug tracking system, and collaborated with engineering to resolve, ensuring data integrity for churn analysis.
- Executed comprehensive data cleaning validation across heterogeneous sources, documenting inconsistencies in detailed English reports, adapting processes to new data schemas, and updating in-house data processing tools to enhance model readiness.
- Designed interactive KPI dashboards in Excel and Tableau, delivering weekly status reports in clear written English to cross-functional teams, facilitating rapid decision-making and demonstrating strong communication and team collaboration.
- Automated reporting pipelines using Python scripts, integrating automated data quality checks that flagged 15+ issues per release, recorded each in the bug tracking platform, and coordinated with stakeholders to prioritize fixes, showcasing adaptability and interpersonal skills.
- Validated data processing scripts on both Windows PCs and Linux-based build servers, mirroring console and PC testing environments, and captured any execution failures in the internal ticketing system for prompt resolution.

PROJECTS

Skin Cancer Detection using Machine Learning

- Developed a CNN-based detection model achieving 92% diagnostic accuracy.
- Processed and analyzed 10K+ dermoscopy images.
- Stack: TensorFlow, Keras, OpenCV, Pandas, Scikit-learn, Flask.

Cryptocurrency Price Forecasting

- Implemented ARIMA, SARIMA, and LSTM models for Bitcoin forecasting.
- Conducted trend and volatility analysis using historical price data.
- Tools: Python, matplotlib, plotly, seaborn.

Real-Time Financial Fraud Detection

- Built fraud detection models using XGBoost and Random Forest.
- Analyzed 50K+ transactions to detect anomalies.
- Created dashboards for fraud velocity and risk analysis.
- Tools: Python, TensorFlow, Streamlit.

EDUCATION

VSM's Somashekhar R Kothiwale Institute of Technology, Nipani, Karnataka

Nipani

Computer Science and Engineering

Dec 2022 - Jul 2026

- 8.6 CGPA

CERTIFICATIONS

- Deloitte – Data Analytics Job Simulation
- Oracle – OCI 2025 Certified Data Science Professional
- Tata – GenAI Powered Data Analytics
